

Abdelrhman Mohamed Hamed

Application Integration Engineer | IBM BPM & FileNet Developer

Smouha, Alexandria, Egypt | +20 106 819 0567 | abdelr7man264@gmail.com
GitHub: github.com/abdelr7man26 | LinkedIn: [linkedin.com/in/abdelrhman-hamed264](https://www.linkedin.com/in/abdelrhman-hamed264)

PROFESSIONAL SUMMARY

Backend-focused Software & Integration Engineer with hands-on experience in architecting and delivering scalable, secure systems across enterprise and healthcare platforms. Proficient in IBM FileNet P8, IBM BPM, REST API design, and multi-service system integration. Dedicated to building maintainable enterprise solutions guided by clean architecture, SOLID principles, and security-first practices.

TECHNICAL SKILLS

Enterprise Integration & Content: IBM FileNet P8, IBM Content Navigator, IBM DataCap, OpenText Content Server, IBM BPM (Level 1–3), Active Directory / LDAP Integration, SOA, Web Services

Programming Languages: JavaScript (ES6+), Python, C#, C++, SQL, Java

Backend & APIs: Node.js, Express.js, ASP.NET Core, FastAPI, REST API Design, Microservices, Service-Layer Architecture

Databases & Caching: MongoDB, SQL Server (T-SQL), Redis, ChromaDB (Vector DB)

Security & System Architecture: JWT, RBAC, OAuth2, AES Encryption, PBKDF2, SOLID Principles, Clean Architecture, Rate Limiting

DevOps, AI & Tools: Docker, Nginx, PM2, RAG (LangChain & Groq), Git/GitHub, Postman, SSMS, Visual Studio / VS Code

SOFT SKILLS

- Critical Thinking & Problem Solving
- Professional Ethics & Workplace Etiquette
- Adaptability & Time Management
- Business English & Communication
- Project & Scope Management
- Leadership & Teamwork

LANGUAGES

- Arabic – Native
- English – Fluent (C1)

PROFESSIONAL EXPERIENCE

- **Application Development & Integration Trainee | National Telecommunication Institute (NTI)** July 2026 – November 2026
 - Completed an intensive 420-hour program in enterprise integration spanning ECM (IBM FileNet P8, DataCap) and BPM platforms.
 - Architected automated workflows, REST/Web Service integrations, Java backend logic, and SQL databases.
 - Applied project management frameworks (scope, schedule, risk) and agile methodologies to deliver a cross-functional capstone solution.
- **Team Lead & Full-Stack Engineer (Graduation Project) | SAGE Healthcare (AI-Powered Medical Platform)** Feb 2026 – Present
 - **Tech Stack:** React, Node.js/Express, Python (FastAPI), MongoDB, Redis, LangChain, ChromaDB, Docker, Nginx, PM2.
 - Architected a containerized three-tier multi-service platform and integrated a multilingual (Arabic/English) RAG AI medical assistant using LangChain and Groq-hosted Llama 3.3.
 - Engineered a live appointment-and-queue engine with cron-driven automation and built secure RESTful APIs with centralized error handling across four user domains.
 - Implemented zero-trust security (JWT, RBAC, AES field-level encryption) and optimized load latency via two-layer caching (Redis + TanStack Query) and targeted MongoDB compound indexing.

- Established production-ready monitoring and testing, including Sentry error tracking, Winston logging, and Jest/Supertest coverage for critical health endpoints.
- **Freelance Desktop Software Engineer | Auto Parts ERP & Management System** April 2026
 - **Tech Stack:** C#, .NET Framework, WinForms, SQL Server, ADO.NET.
 - Architected a production-ready enterprise ERP (presentation, service, and repository layers) to automate sales, purchasing, and returns with transaction-safe (ACID) financial processing.
 - Designed a normalized SQL Server database with enforced integrity rules and developed a real-time analytics suite for inventory valuation, alerts, and cash-flow reporting.
 - Secured sensitive financial data using PBKDF2 password hashing, granular RBAC, and fully parameterized queries to prevent SQL injection.
 - Optimized system performance and UI responsiveness through strategic database indexing, push-down aggregation, and fully asynchronous data access.
- **Core Banking & ATM System Suite** January 2026
 - **Tech Stack:** C++ (OOP), File-based persistence, Layered Architecture.
 - Engineered a dual-application banking suite (staff back-office and ATM terminal) sharing a central datastore, utilizing a clean layered C++ OOP architecture with Active-Record persistence.
 - Developed core transaction processing logic with overdraft protection, a USD-pivoted multi-currency exchange engine, and real-time balance synchronization across channels.
 - Enforced system security through bitmask RBAC, credential-based authentication with session tracking, field-level encryption at rest, and append-only audit logging.
- **.NET Developer Intern** | *Codveda Technologies** (Mar 2026 – Apr 2026)
 - Contributed to enterprise-level applications across the .NET ecosystem. * Applied SOLID design principles and Clean Code practices to maintain a scalable and testable codebase.

EDUCATION

B.Sc. in Computer Science — Tanta University

2022-2026

Faculty of Computers & Information

- Relevant coursework: Data Structures, Algorithms, Object-Oriented Programming, Database Management Systems.

ACHIEVEMENTS & CERTIFICATIONS

- Application Development & Integration Trainee — National Telecommunication Institute (NTI).
- ITIDA + GIGs freelancing program powered by eyouth and ITIDA.
- Team Lead for the SAGE graduation project — owned full-stack architecture and AI integration across a four-person team.
- Solved 299+ algorithmic and data-structure problems on LeetCode and HackerRank.
- professional AI training programs with Huawei and the National Telecommunications Institute (NTI).
- AI training programs with Spring.
